

60 Most Asked Data Science

Interview Questions

Code-Based + Case-Based Questions Inside

Disclaimer

Everyone learns uniquely.

Learn Redux in a structured manner and master it by practically applying your skills.

This Doc will help you with the same.

Q. 1 : What is Data Science?

Ans.: Data Science is an interdisciplinary field focused on extracting knowledge and insights from data using scientific methods, algorithms, and systems. It combines aspects of statistics, computer science, and domain expertise.

Q. 2 : What are the differences between supervised and unsupervised learning?

Ans.: Supervised learning involves training a model on labeled data, whereas unsupervised learning involves training a model on data without labels to find hidden patterns.

Q. 3 : What is the difference between overfitting and underfitting?

Ans.: Overfitting occurs when a model learns the noise in the training data, performing well on training data but poorly on new data. Underfitting occurs when a model is too simple to capture the underlying patterns in the data, performing poorly on both training and new data.
